**CONSTRUCTION STONE
SOUTH-EAST FENNOSCANDIA:
FROM GEOLOGY TO ARCHITECTURE**

**On May 28-29, 2015,
Viborg**

Dear colleagues!

South-East Fennoscandia which is the part of the Baltic crystal Shield is many centuries a source of receiving various natural construction materials. The Karelian natural stone decorates the numerous cities, it can be seen in a decor of buildings and constructions in the distance from the Finnish and the Russian Karelia. Granites, marble, gneisses and other rocks extracted in the region make a basis of monuments of architecture of St. Petersburg, Helsinki, Turku, and other cities well-known for the whole world. Considerable volumes of stone construction materials of the region are used in road construction, improvement of the areas and embankments, facing of residential and production buildings, restoration of monuments of architecture. Organizers of conference hope that the meeting and communication of experts in areas of geology, production and processing, rational, ecologically and economically reasonable use of a natural stone will promote the solution of many research and practical tasks.

Conference themes:

1. Regularities of placement and types of construction materials in the Karelian-Finnish region.
2. New tendencies in requirements of the world market of construction materials and their realization in Finland and in Russia.
3. Geological structure of construction materials deposits.
4. Conditions of formation of fields of a block stone deposits ; their tectonic features.
5. Modern techniques of prospecting works by searches, an assessment and investigation of a facing stone.
6. New technologies of quality control of a construction stone.
7. Requirements to physical-mechanical properties and to decorative effect of a natural stone, methods of their assessment in modern conditions
8. Radiation safety of natural construction materials, requirements for various scopes.
9. The newest technologies of production and processing of natural construction materials.
10. A stone in the image of cities, questions of its preservation.
12. Methods of restoration of stone monuments of architecture and art.
13. Use of waste from dumps of fields of a construction stone and eliminations from crushing.
14. Environmental problems of development of construction stone deposits.
15. Formation of the modern legislation in the field of all-widespread minerals

Excursions

(May 29):

1. Granite pit mine «Erkilya». Acquaintance to career economy, to development methods, production of construction crushed stone, use waste rocks.
2. Facing granite pit mine of «Vozrozhdeniye». Acquaintance with a geological structure and features of mining conditions of the well-known field gray and pink the orbicular of granites rapakiva, the kinds of a stone applied by technologies of receiving blocks and their processing's.
3. Vyborg and its vicinities (museum of castle the lock and Monrepos Park)
